

**Hi there!**

As mentioned during the NXT.UP event, we linked a **case** to the workshops. It serves as a kind of **challenge** in which we get to know you and your skills a bit better. We are really looking forward to seeing your result!

This assignment is part of the **front-end development** talk and will require you to use and implement some services and features that were mentioned. The main focus of evaluation will be on how all pieces are puzzled together. The general directives are not very strict - choice of CMS, choice of hosting etc is completely up to you.

### **Assignment**

**1. Pick a managed headless CMS**

We recommend using Prismic, Contentful or Dato CMS, but you can always use some other service. 🧐

**2. Make a recipe model**

Add the necessary fields and relations to other models to facilitate a nicely documented recipe.

**3. Put your 3 favourite recipes in the CMS**

Once you finalise your model, go ahead and add some recipes! 🍲 (don't forget veggies)

**4. Set up a Next.js project**

Setup your Next project, you should find all the info you need in the Next docs. 📖

**5. Set up the connection with your CMS of choice and fetch your recipes**

Get that data! (ps: We love GraphQL)

**6. Make a small overview page + detail page to showcase your recipes**

Display your recipes in a mobile-friendly way??. CSS is your friend. (or use a framework of your liking, we won't judge).

**7. Host your project**

Deploy your final result to the interwebs!

## Deliverables

- A public GitHub repository link with full commit history (so we can evaluate your progress)
- A link to your hosted end-result (and a description where/how you hosted it)
- You can hand in your file with both links on our [website](#). Fill in the information and attach your file in the cover-letter section. If you already applied for an internship through our website, just send your file to us: [nxtup@inthepocket.com](mailto:nxtup@inthepocket.com).
- The **deadline** for uploading/emailing your creation is 6/10 at 17:00.

## Tips

- We estimate a workload of +/- 4 hours for this case.
- Dare to think out of the box!
- Try to use the information you received during the workshop and the information that you can find on our website.
- Keep our brand values/image in your mind.
- Any questions: [nxtup@inthepocket.com](mailto:nxtup@inthepocket.com)

Good luck!

NXT.UP team
